

Buddhadev Sahu

Java Backend Developer | Experience: 2+ Years

Email: buddhadev0509@gmail.com

Phone: 7001780223

Professional Summary

Competent software engineer with a focus on RESTful API architecture, Spring Boot, and microservices. Adept at designing and building scalable microservices architectures, leveraging a strong foundation in Java and data structures to deliver reliable and efficient solutions. Demonstrates strong problem-solving abilities, a collaborative mindset, and a passion for using modern technologies to drive innovation and achieve impactful results.

Technical Skills

Languages & J2EE Technologies	Java 17, SQL, Servlet, JSP and JDBC
Back End & Frameworks	Spring Boot 3, Spring Framework, Spring MVC, Spring Data JPA, Spring Security, Spring AI, Hibernate/JPA, Spring Batch
Design Patterns	Singleton, MVC, SAGA, Factory, DTO, DAO, Builder
Micro-service & API Development	Micro-services Architecture, RESTful APIs, API Design, API Gateway concepts, Service-to-Service Communication, Event-Driven Architecture
AI & Generative AI	Spring AI, Generative AI, RAG (Retrieval-Augmented Generation), LLM Integration, Prompt Engineering, Embeddings, Ollama, Gemini API, AI-powered Document Q&A
AI-Assisted Software Engineering	AI Agents, Cursor, OpenCode, GitHub Copilot, AI-assisted Code Generation, AI-assisted Debugging, Code Review, Refactoring, Test Generation, Documentation Generation, Performance Analysis, Pipeline Testing, Error Handling, Security Review, Java Coding Standards, Inter-Service Development
Authentication & Security	Keycloak, OAuth 2.0, OpenID Connect (OIDC), JWT, PKCE, RBAC, Session Management, Google/Apple Authentication
RDBMS Applications	PostgreSQL, MySQL, MongoDB, SQL
Caching & Messaging	Redis, Kafka, Event-Driven Communication
Cloud & Azure	Microsoft Azure, Azure Container Apps (ACA), Azure Container Registry (ACR), Azure Database for PostgreSQL, Azure Key Vault, Azure Event Hubs, ACA init-Job
Infrastructure & Version control system	Docker, GitHub Actions, CI/CD, Git, GitHub
Serviceability & Monitoring	OpenTelemetry, Grafana, Loki, Tempo, Mimir, Jaeger
Development Tools	Eclipse, Visual Studio Code, Spring Tool Suite, IntelliJ Idea, Bruno, Maven
Software Development(SDLC)	Agile Methodology, ClickUp

Professional Experience

CoffeeWeb Pvt. Ltd.
Duration: March 2026 - Present
Project: Social Media Platform
Domain: Social Media / Digital Platform

Back End Technologies	Java 17, Spring Boot, Spring Data JPA, Spring Security, Spring Batch, Microservices
Microservices	Auth, Post, Engagement, Feed, Relation, Media & Notification Services
Authentication & Security	Keycloak, OAuth 2.0, OIDC, JWT, PKCE, RBAC, Google & Apple Authentication
Cloud & Infrastructure	Resource Group, ACA, ACR, Azure PostgreSQL, Azure Key Vault, Docker, CI/CD, GitHub
AI / GenAI	Generative AI, LLM Integration, RAG, Prompt Engineering, Vector Embeddings, Ollama, AI-Assisted Development
Database & Caching	PostgreSQL, Redis
Logging API	OpenTelemetry, Grafana Cloud, Loki, Tempo
API Documentation	Postman, Swagger, Bruno
Tools Used	IntelliJ Idea, Agile, SQL Developer, Postman, Maven

Project Description

CoffeeWeb is a cloud-native digital platform built for the global coffee industry, connecting coffee professionals and businesses through industry insights, market information, news, and interactive content. The platform enables users and businesses to share and consume coffee-related content, engage with the community, and access valuable market intelligence through a scalable and secure microservices architecture.

Roles & Responsibilities

1. Developed and maintained Java 17 / Spring Boot microservices covering authentication, posts, engagement, feeds, relationships, media, and notifications.
2. Designed and developed centralized authentication architecture using Keycloak to provide a unified authentication and authorization mechanism across backend services.
3. Integrated external identity providers such as Google and Apple with the centralized authentication system using OAuth 2.0 / OpenID Connect flows.
4. Built core platform features such as posts, comments, likes, follows, user relationships, personalized feeds, and business content.

5. Worked with **PostgreSQL**, **JPA/Hibernate**, and **Redis** caching, and performance optimization.
6. Implemented **centralized logging**, **metrics**, and **distributed tracing** using **OpenTelemetry**, **Grafana**, **Loki**, **Tempo**, **Mimir**, and **Jaeger**.
7. Containerized microservices with **Docker** and supported deployment on **Azure Container Apps (ACA)** using **Azure Container Registry (ACR)**.
8. Worked on **API reliability**, **idempotency**, **session management**, **exception handling**, **performance optimization**, and **production readiness**.
9. Collaborated with frontend, QA, and DevOps teams using **Git**, **Maven**, **Azure CLI** **Swagger/OpenAPI**, and **Postman** to deliver features and resolve issues.

Zediant Technologies Pvt. Ltd.

Duration: Sept 2024 - March 2026

Loan Recovery Automation (LRA) Platform

Domain: Fintech

Loan Recovery Automation (LRA) Platform is a debt collection management system which was developed to automate and speed up the loan recovery and repayment process. The application is scalable, modular, and capable of handling substantial volumes of loan data because it was created using a micro-service approach.

It covers multiple stages of the loan life cycle, from delinquency detection to recovery follow-ups, through automated procedures, real-time notifications, and seamless interaction with other services like payment gateways and SMS/email gateways.

Roles and Responsibilities:

As a **Backend Developer**, I was involved in

1. Designed and contributed to the microservices architecture for the project, ensuring scalability and clear service boundaries.
2. Developed backend microservices using **Java** and **Spring Boot**, focusing on delinquency management, bucket management, and collector assignment functionalities.
3. Implemented business logic to manage delinquent accounts, organize loans into appropriate buckets, and automate collector assignment workflows.
4. Optimized service performance to efficiently handle large volumes of loan and customer data.
5. Collaborated closely with frontend and QA teams to debug, test, and resolve integration issues, ensuring reliable end-to-end functionality.
6. Actively participated in code reviews and bug-fixing activities to maintain high code quality and improve system stability.
7. Engaged in daily stand-ups, sprint planning, and team meetings as part of an Agile development process.
